MYLK wt Allele

National Cancer Institute

Source

National Cancer Institute. *MYLK wt Allele*. NCI Thesaurus. Code C51249.

Human MYLK wild-type allele is located within 3q21 and is approximately 272 kb in length. This allele, which encodes myosin light chain kinase, smooth muscle and non-muscle isozymes protein, is involved in myosin light chain activation, vascular permeability and the formation of edema in tissues.
