Please find below suggestions to improve the paper.

1. A benchmark survey and needs assessment was conducted but the findings from the survey and assessment was not provided. It would be good to provide a summary of the findings in the paper.
2. It would also be good to provide a brief overview on the area chosen in terms of location within Phillipines, size of area, size of community, situation of the community before the system was implemented and availability of renewable energy sources at the location. This is to explain the need for renewable energy source to supply electricity to the area and also to justify the choice of pico hydro and solar as the renewable energy source.
