Potential competing interests: No potential competing interests to declare.

The paper presents an ecological analysis of the relations between various physical characteristics and the cumulative occurrence of COVID-19.

The points to be worked on

1. Follow the standard template for paper publications Eg.: In place of "What Is a Multi-factor Model" it can be preferred as 'Introduction' similarly Materials and methods, literature survey etc.
2. Use standardized values instead of raw variables while analysis of comparison studies.
3. More insight view of previous studies should be included.
4. Terminology which has been demarcated for epidemiology field should be cross check
5. Few references does not match with content delivery
6. Mathematical novelty is missing
7. Extrapolation methods accuracy should be analyzed more in depth.
8. Overall article content is satisfactory.
