The experiment is very well explained and correctly written. I consider the topic to be very relevant and innovative, so my review only includes slight modifications with the aim of continuing to improve the text:

Below, I list the suggested modifications:

- Write keywords that are not included in the title.
- Describe why the leaves of this specific plant were used.
- Describe against which curve or control the chlorophyll a and b content was quantified.
- What was the method of separating stockings used?
