Potential competing interests: No potential competing interests to declare.

The study provides a comprehensive analysis of alternative techniques and ISO 9001 implementation in Tunisian architecture firms. It acknowledges early obstacles and succinctly emphasizes the advantages, such as improved service quality and market competitiveness. "Planer am Bau" is included, which offers insightful information about specialized methods for architects. Nonetheless, additional investigation into workable implementation tactics would increase the article's relevance. Additionally, while the discussion on French HQE standards is informative, additional emphasis on overcoming potential hurdles in their implementation would increase the comprehensiveness of the review. Indeed, it offers insightful information to architects who want to improve their quality control procedures.
