Dear author,

Congratulations on your work. I would suggest adding a reflection on the role of digital health in the continuity of care theme. What challenges we might anticipate (e.g., transformation in doctor-patient relationship) and what the proposed paths are to overcome these challenges. Additionally, how we might place health professionals other than the general practitioner at this continuity of care. For multi-professional teams aiming at the integration of healthcare, how can we operationalize continuity of care among patients and providers?

Many thanks for the opportunity to review your work.
