Potential competing interests: No potential competing interests to declare.

Author has discussed the use of medical physics for cancer treatment. There are a few issues that need to be addressed before the acceptance of the manuscript:

1. English needs to improve; the manuscript should be corrected by a native English speaker.
2. In each section, only one or two references are there; to make the review more informative, each section should have at least 5-7 studies included with their important findings.
3. A comparison section for different methods should be included, and a more comprehensive conclusion should be there.
4. Elaborate on the use of artificial intelligence and give more evident references for it.
