Review of: "Positive Psychiatry: Reframing Mental Health Care Among Elderly"

Mohammad Aryaie¹

1. Imperial College London, United Kingdom

Thank you very much for inviting me to review this paper.

This paper is a good review of the current literature to frame clinical approaches to evaluate older adults with mental illness and their treatment, and is appropriate for publication. There are just some minor comments below:

1. Include practical tools, strategies, or case examples for clinicians.
2. Define key concepts like “personal mastery” more clearly.
3. Address potential barriers or limitations of applying positive psychiatry in older adults.
4. Suggest adding a short key message

Kind regards,

MA
