

Review of: "Optimizing Agronomic Practices for Aerobic Rice under Calcareous Soil in Bihar"

Debashis Dutta

Potential competing interests: No potential competing interests to declare.

The article is of a very general type and has no new information that can enrich the knowledge of the scientific community. The abstract of the article should be data supportive and should reflect the aim of the study. The results and discussion parts should be revised. The conclusion part should cover the hypothesis of the study. The abstract should be written in a standard format, i.e., introduction, materials and methods, results, and conclusion. But here, the abstract starts with materials and methods and gives emphasis to methodology.

The results and discussion portion should be supported by reference work, which is very much lacking, and the references that are mentioned are very old.
