**Potential competing interests:** No potential competing interests to declare.

1. Introduction: Suggested to be elaborated as follows:

1. State of water and groundwater based on the hydrologic cycle, uses of surface and groundwater, and the importance of groundwater, contamination of groundwater
  2. Coastal hydrogeology, groundwater movement in coastal aquifers, declined groundwater levels, and saline-water intrusion
  3. Saline water intrusion around the world and why this topic is important around the world, as well as in Egypt
  4. Objectives of this research
2. The captions for all figures should be more informative. For example, the title of the figure could be improved by providing more information on how groundwater is stored and withdrawn and the role of groundwater level with recharge and discharge.
3. Sections 2-4 could be more elaborate with examples and references.
4. Please improve the overall language and check for any grammatical errors.
