Potential competing interests: No potential competing interests to declare.

This review brings a novel insight into the therapeutic treatment of HIV disease using the strong antimicrobial Hypochlorous Acid (HOCl). This review has provided enough reasons for the mechanism of HOCl against HIV. However, the discussion needs to be added so that the discussion will be more comprehensive.

The article would benefit from a more detailed discussion of the mechanism of HOCl against HIV viruses.

The author could mention the socioeconomic impacts of the use of HOCl as a potential treatment for HIV.
