# Monoclonal Antibody 3622W94

National Cancer Institute

## Source

National Cancer Institute. *Monoclonal Antibody 3622W94*. NCI Thesaurus. Code C2470.

A humanized murine monoclonal antibody (MoAb) against the 17-1A antigen, with potential adjuvant therapeutic properties in colorectal cancer. 17-1A antigen (EpCAM), a human epithelial cell adhesion molecule, expresses in a variety of carcinoma tissues, such as those of colon and breast carcinomas. Immunization with MoAb 3622W94 may elicit immune responses, which could result in eradicating tumor cells expressing 17-1A antigen.
