Review report of the manuscript entitled **"An Analysis of Literature on Topical Steroid Withdrawal in Dermatology"**

Topical steroids, which have been used to treat a number of dermatological disorders and are one of the most often prescribed medications in dermatology, are included in the current review paper. Authors have discussed current knowledge, myths, and abuse surrounding topical steroids in this review. They have also discussed recent findings of clinical manifestations, patient opinions in the literature, and current understanding. Also, authors have focused on cutting-edge therapy modalities and care regimens to improve long-term patient outcomes and lessen the side effects of these drugs. The work is nicely elaborated in the abstract section. However, introduction section should be more up to date. Kindly go through these articles and include them into the reference section:

<https://doi.org/10.1080/07391102.2022.2123392>

<https://doi.org/10.1080/10406638.2022.2092878>

The paper is also highly comprehensive and beautifully presented, which can aid in the design or synthesis of novel steroids; hence, it can be approved for publication with the aforementioned changes.

Thanks and regards,

D. Sharma
