

Review of: "Giardia lamblia infection And Associated Risk Factors Among Patients Who Are Seeking Stool Examination At Bule Hora University Teaching Hospital, West Guji Zone, Ethiopia"

Djamel Baroudi

Potential competing interests: No potential competing interests to declare.

The work is interesting in public health, and *Giardia* remains the most important frequent intestinal parasite. The risk factors are well studied in the region. However, to give more original status to the work, *Giardia* is a potential zoonotic parasite, so if we think about the One Health concept, the authors should provide more details on the animals' presence and contact with the positive cases. Thus, the work would be more interesting if molecular methods were used to determine the assemblages and subassemblages of *Giardia duodenalis*.
