

Review of: "Hepatoprotective Effect of the Ursolic Acid-Oleanolic Acid Mixture Administered Intragastrically in Mice with Liver Damage Induced by Anti-TB Drugs"

Ahmed M. Al-Yassen

Potential competing interests: No potential competing interests to declare.

It is smooth, seamless qualify investigation and Pleasure to mention some points:

1 - Article title may be modified to Hepatoprotective Effects of Ursolic Acid-Oleanolic Acid Mixture Against Liver Damage Induced by Anti-TB Drugs in Mice).

2 - It is not important to introduce TB Data, instead, more focusing on Anti-TB drugs.

3 - Well written abstract.

4 - The reason behind the uses of this mixture of Ursolic Acid-Oleanolic Acid should be explained and elaborated.

5 - The Frequency of I.G. route during 60days not mentioned.

6 - The graphs, histograms and other drafts were nifty presented.

6 - Modern and updated references.

Best wishes for future work
