Review of: "Factors Influencing Coffee Shop Visitors' Non-Verbal Communication Experience Based on the Choice of Colour and Interior Design Elements"

Chi-Jui Tsai¹

1. Ming Chuan University, Taiwan, Province of China

Interesting topic of research value The following personal thoughts and suggestions after reading 1-The research scope can explain the color or color temperature of the coffee space sample, mainly the color temperature of the lighting, or including the lighting and space configuration color, because if the lighting color temperature is biased towards warm or white, the color configuration inside the space will be affected by the color temperature. 2- If you can attach samples or photos of the space, you can explain the completeness of the research more clearly 3. The electrical conduction of the space sample is an average configuration or a non-average configuration. Different methods will affect the feeling of space movement, comfort, social warmth, emotion, familiarity, and relaxation. The results of the research may lead to different results due to the electrical conduction configuration.
