Potential competing interests: No potential competing interests to declare.

The author(s) discussed very well by examining some parameters and their relationship.

Some issues that help to improve the work:

1-In the material and methods (Determination of Total Phenolic Content), it was mentioned, " A 1 mL of extract was mixed with 2.5 mL of deionized water. Subsequently, a 2.5 mL of Folin-Ciocalteu reagent (10%, v/v) was added. After 5 minutes, 2 mL of Na₂CO₃ solution (7%, w/v) and 2 mL of deionized water were added." How was the concentration of the extract calculated?

2-Statistical methods are not described.

3-Significant letters in Figure 2 are incompletely written. Is there a specific reason?
