Potential competing interests: No potential competing interests to declare.

The paper consists of all relevant parts for understanding the subject. The paper demonstrate an adequate understanding of the relevant literature. The authors have described theory and have presented the obtained results with explanations.

Some remarks:

1. What about band-stop filter? Is it possible to design it in this manner and to explore its characteristics?
2. Prepare all references in the same way.
3. Go through the whole text and make changes of some typo errors.
