The main purpose of this article can be stated as decreasing non-revenue water in Egypt using GIS. The topic aims to produce a solution to a current environmental problem. However, it contains some mistakes and lacks according to the scientific article writing format. The study does not include detailed information about the use of GIS. Though the article is based on GIS, the scientific contribution of the article should be well explained. The use of in-text references seems to be missing. The Method and Material sections are not completely separated from each other. In this context, the sections can be revised in a different way. Many figures should be created again comprehensibly. The results of this study should be discussed by comparing them with similar studies in the literature. The number of relevant references should be increased. As a result, this article should be reviewed with major revision.

Best regards and yours sincerely,
