**Potential competing interests:** No potential competing interests to declare.

This is a valuable addition to the library of face lift techniques. The article is well written, thoroughly documented and its publication is fully deserved. The premise of anti-gravitational crisscrossing of the threads makes sense, however the danger of damage to blood vessels, nerves and glands performing such procedure should have been included in the discussion, as well as the potential for further improvement of this technique, as the oral commissure groove improvement seems subpar.
