Potential competing interests: No potential competing interests to declare.

I appreciate the work presented by authors. following are my comments.

1. in Figure 2, please mention about parameter used on horizontal axis, axes labeling can improve the ease of understanding.
2. Increased educational activities are causing increased noise levels? Authors may please explain what kind of educational activities are increasing noise levels.
3. felt some statements needs proper phrasing for example "Upon identifying the sources of noise generation within the study location, the apparent consequences include." in section 7.
4. section 6 may be elaborated for better understanding of actual measurements made (position, location, timing) with the help of pics or diagrams.
5. Plate 2 shall be cited in the text.
