Based on the results of the review of this article, several things that we can explain include the following:

1. The abstract is very lacking and does not contain: background, methods, and analysis results. It does not indicate what results were obtained from the analysis performed.
2. The background is very short and does not explain the importance of the analysis carried out, and the article citations used are very lacking.
3. The methodology must be equipped with: data source, data type, and length of data used.
4. In the article, there is no conclusion.
6. The references used are very limited to a minimum of 20 recent references.
7. Major repairs required.
