The paper is well written. The study has lot of significance. Abstract needs to be recast based on the major findings. Standard methodologies have been used. Remotely sensed data has been used in the article. Can the authors use weather data collected from nearby meteorological observatory and then conclude the results? It would be better if weather data during the study period is given in graphical form. Provide more details with regard to design of experiment and treatments. There are some grammatical mistakes in the text, correct them.
