MA 131I Osteogenic Sarcoma

National Cancer Institute

Source

A radioimaging agent consisting of the 131 I-labeled murine monoclonal antibody 791T/36 which is directed against the tumor-associated antigen 791Tgp72. MA 131I Osteogenic Sarcoma binds to an antigen found in osteogenic sarcomas and colorectal and breast carcinomas, thereby enabling the scintigraphic visualization of primary and metastatic tumors that express 791Tgp72.
