Potential competing interests: No potential competing interests to declare.

I have read the article carefully that describes a new model for electric vehicles. In my opinion, there are three points that should be addressed properly to improve the current research.

1-It is better to write the verbs in the third person.

2-The quality of some figures is low.

3-The current research considers the parameters affecting the performance of Electric Vehicle. It is suggested to evaluate the efficiency of the model by practical examples.
