Potential competing interests: No potential competing interests to declare.

The paper regards the safety concept in a smart city. The current version presents some limits in relation to the contents and its form.

In relation to the contents, I suggest the authors to consider the European concept of smart city. Please, see for instance:

https://doi.org/10.1007/978-3-031-39446-1_7

<https://doi.org/10.3390/app13031773>

The problem is to find a convergence between theories, rules and implementation. The safety problems are related to other urban challenges. An integrated planning approach can be useful for facing these problems.

In relation to the form, please improve the presentation. Great part of text is presented as bullet list. It is not fine for a scientific paper
