# Dedifferentiated liposarcoma

INSERM

## Source

*INSERM. (1999). Orphanet: an online rare disease and orphan drug data base.*

*Dedifferentiated liposarcoma. ORPHA:99970*

Dedifferentiated liposarcoma (DDLs) is a high-grade subtype of liposarcoma (LS; see this term) that progresses from well-differentiated liposarcoma (WDLs; see this term), and most often occurs in the retroperitoneum. It is defined as a region of nonlipogenic sarcoma associated with WDLs. .
