Potential competing interests: No potential competing interests to declare.

This study is aimed at investigating the relationship between environmental factors in urban areas and criminal patterns in Australian context.

This topic is well addressed through literature review and the discussion in the manuscript.

The title is revised in a better way. However, the title is still not so strongly related to this research as this research did not analyze the urban heat island effect but investigate the temperature changes.

All the caption should provide more information on the figures and the tables.

Presentation should be checked according to the publication rules of this journal: the numbering of figures, the use of abbreviations without explaining original terms, the system of sub-headings.

English through the whole text should be double-checked. There is a confusion of using 'effect' and 'affect' in the manuscript.
