Procollagen Type I N-Terminal Peptide

National Cancer Institute

Source

National Cancer Institute. *Procollagen Type I N-Terminal Peptide*. NCI Thesaurus. Code C116963.

A polypeptide comprised of the amino-terminal portions of procollagen, which are proteolytically removed during the intracellular formation of type I collagen fibrils. Increased plasma or serum concentrations of these peptides are associated with both fibrillogenesis of type I collagen and bone formation.
