Potential competing interests: No potential competing interests to declare.

The topic of the paper is contemporary and topical, and the research methodology and results may be of interest to other researchers and companies. The structure of the paper is logical and the theoretical and practical arguments are presented in a coherent manner, drawing on relevant scientific sources. It is particularly good that the paper uses a practical example to demonstrate the importance of partner cooperation and to show the distribution of the benefits among the many partners involved.

However, the authors could perhaps have been advised to include some alternative practical examples in the calculations and to demonstrate in more detail and with concrete evidence the synergistic effects often mentioned in the paper.

Note: The consistency and correctness of the formulas presented and the accuracy of the calculations have not been checked in the evaluation of this paper.
