Thank you for your hard work on this topic you have chosen, because it is very important and becomes more relevant every day. I have examined the document and have a few significant observations that may help you improve it. The methods used to investigate the association between emotional intelligence and cyber victimization are somewhat confusing. I would appreciate more clarity regarding how data is presented in this study. Scientific studies, particularly those addressing challenging topics, must adhere to standards of rigor. Thank you so much for your contribution to this very interesting topic.
