Abstract

The results show only p-values and confidence intervals, but there is no measure of effect. This is confusing. What does the confidence interval represent?

There is a repetition of results in the conclusion. This should not be so.

Introduction

Kindly explain the EDHS report briefly.

When you say the educational level was significantly associated with incomplete vaccination, what do you really mean?

Paragraph 11 is a repetition of paragraph 9. Kindly check and update your references as well.

Materials and Methods

The sample size of 118, collected over a period of 3 months, looks rather scanty. Did you perform any sample size calculations before study initiation?

Your inclusion and exclusion statements look too simple. For example, if you exclude those above 5 years, it is implicit that those 5 years and below are included, so there is no need to say that.

What is the relationship between n , n_0 , and N ?

Results

Kindly put the variable names above the covariates in Table 3.

Discussion

The limitation of financial constraint is not acceptable because every researcher must prepare well before embarking on a research study. There are other limitations in your study. Kindly see more experienced researchers for assistance.

GENERAL COMMENT

You need to up your game concerning some of your English language expressions. Kindly seek help here too.
