Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Peripheral neuropathy-myopathy-hoarseness-hearing loss syndrome. ORPHA:397744*

Peripheral neuropathy-myopathy-hoarseness-hearing loss syndrome is a rare, syndromic genetic deafness characterized by a combination of muscle weakness, chronic neuropathic and myopathic features, hoarseness and sensorineural hearing loss. A wide range of disease onset and severity has been reported even within the same family.
