Potential competing interests: No potential competing interests to declare.

The introduction of the study is appropriate and is important since the popular use of this plant is extensive. However, there is a lack of additional information such as: what concentration and form are popularly sold? Are all the pathologies mentioned treated the same way?

Indicate the closest geolocation to sample collection

What is the reason for using this crustacean as a genotoxic test model? Include in the introduction and/or conclusion.

The study is written objectively with the description of the cells and organs affected by the toxicity caused by the oil from the studied plant, which concludes its conclusion, however it does not show the comparison, if any, between the doses used in crustaceans or even the reason the use of these animals.
