Potential competing interests: No potential competing interests to declare.

The author has clearly taken the research with the recent topic needed for the education sector. The author has investigated the potentials of information technology development and the tools that has been developed especially for the education sector. Moreover, the author has done the study on 6 IT trends and has thoroughly given the application for each IT trends which has good readability and understanding too.

The suggestions from my side, I found that there is no diagrammatic representations and quantitative results which has been highlighted in the paper. If possible a general block diagram and the results in the literature between 2015-2023 can be updated as a consolidated results / tabulation which will give better clarity for the readers.

The above suggestions may be considered in a positive way and can be incorporated.
