# Nephrotic Syndrome with Lesion of Persistent Glomerulonephritis

National Cancer Institute

## Source

National Cancer Institute. *Nephrotic Syndrome with Lesion of Persistent Glomerulonephritis*. NCI Thesaurus. Code C35537.

A renal functional disorder characterized by proteinuria, edema, hyperlipidemia and hypoalbuminemia. It results from damage to the renal vascular filtration apparatus. It is further characterized by a chronic inflammatory reaction in the glomerular capillaries. Sequelae may include hypertension, atherosclerosis, infection, hypercoagulability and renal failure.
