# I 131 Monoclonal Antibody F19

National Cancer Institute

## Source

National Cancer Institute. *I 131 Monoclonal Antibody F19*. NCI Thesaurus. Code C2515.

A radioimmunoconjugate of a murine monoclonal antibody (MoAb) F19 labelled with Iodine 131 (I-131). MoAb F19 was raised against fibroblast activation protein (FAP), which is highly expressed by tumor stromal cells. Using MoAb F19 as a carrier for I-131 results in the targeted imaging and/or destruction of cells overexpressed FAP.
