Nisoldipine

National Cancer Institute

Source

National Cancer Institute. *Nisoldipine*. NCI Thesaurus. Code C29291.

A dihydropyridine calcium channel blocking agent. Nisoldipine inhibits the transmembrane influx of extracellular calcium ions into myocardial and vascular smooth muscle cells, causing dilatation of the main coronary and systemic arteries and decreasing myocardial contractility. This agent also inhibits the drug efflux pump P-glycoprotein which is overexpressed in some multi-drug resistant tumors and may improve the efficacy of some antineoplastic agents. (NCI04)
