Potential competing interests: No potential competing interests to declare.

The manuscript seems to be an interesting and promising study, mainly in the search for energy precursors for a real energy transition.

Some aspects are important to highlight:

- * Photographs and images need to be in adequate scale and good quality.
- * Since these are experiments, it is necessary to cite the rigorousness of the technical standards used.
- * If necessary, it is mandatory to make replicates of the experiments.
- * Discuss the results in more detail
