Title: Green Strategies for the Synthesis of Quinolone Derivatives

General comments: The work is presented in an effective manner overall; however, the manuscript requires revision. A few small changes are recommended to resolve shortcomings and increase clarity.

The author should clearly state the problem in the introduction section. English grammar and style should be strongly improved.

Structures and reaction schemes are not uniform throughout the manuscript; please use the most recent format of the ChemDraw version.

Most of the reaction schemes shown in this manuscript have drastic reaction conditions.

The author mentioned the biological activities of quinolone derivatives, so please check the title of the manuscript.

Please add recent references to green synthesis.

Recommendation:

The manuscript is appropriate for publication following peer review with modest adjustments to address constraints and improve clarity.
