117-126:FGF-5 Peptide

National Cancer Institute

Source

A fragment of fibroblast growth factor-5 (FGF-5). Originally isolated from a renal cell carcinoma cell line that overexpressed FGF-5, FGF-5:117-126 peptide is recognized by tumor infiltrating cytotoxic T lymphocytes. Overexpressed by several cancer cell types, this peptide is being tested as a potential target for antineoplastic immunotherapies. (NCI04)
