Potential competing interests: No potential competing interests to declare.

The manuscript details the information collected on several farms dedicated to dairy production, and as seen in the results section, dystocia, abortion, and retention of fetal membranes are the main problems in the dairy industry in that area.

The authors analyze factors that are associated with these reproductive problems and show significant probabilistic values with body condition and management systems.

In the materials and methods section, was the questionnaire previously validated in a pilot study?

Is there any bibliographic reference that describes the previous methodology in the questionnaire, together with all the descriptors and classifications?

As an analysis proposal, it would be beneficial for the manuscript to perform a logistic regression with the factors that were significant and thus obtain the odds ratios.
