Tobacco-containing product

Addiction Ontology

Source

Addiction Ontology

Definition: A product that is made of tobacco or has tobacco as a part and is used by people to take some tobacco constituent into the body.

Comment: This class includes products that contain or consist of parts of the tobacco plant that have been subject to some form of processing. This class does not contain products that only contain nicotine. These are dealt with separately as 'nicotine-containing products'.

This definition was imported from the Addiction Ontology (see <https://addictovocab.org/>). Comments and suggestions for improvements are welcome using the Qeios review system.

Definitions imported from the Addiction Ontology (AddictO) are what are known as 'ontological definitions'. See this article in Qeios for an explanation <https://www.qeios.com/read/YGIF9B>.

Ontological definitions can sometimes be hard to read. In those cases we also include an informal definition.

Definitions also often require elaboration to make it clear how they should be used and what they include. In those cases we include a comment.

Also, definitions sometimes require an explanation as to how they came about to help users understand how they relate to alternative definitions. In those cases we include a curator note.
