A relevant article. Emergence of Omicron is indeed a concern and involves a lot of factors both the pathogen and host immunity. I recommend addition of a short para on host-parasite interactions of COVID-19 (author may include <https://doi.org/10.1002/jmv.25987> and <https://doi.org/10.1002/jmv.26387>). Similarly, utility of mAbs in encountering Omicron (<https://doi.org/10.3389/fimmu.2021.782506> and <https://doi.org/10.3390/antib12010017>) may be included.
