Potential competing interests: No potential competing interests to declare.

The article explores the loneliness epidemic in detail. Appreciations to the author for the extensive literature review. The findings offer excellent scope for further research. The paper can be made better by incorporating the following:

1. A few research questions for which the author has found answers from the literature review
2. The analysis section can be written based on the research questions
3. A methodology section explaining how the author chose the papers, how they were reviewed, whether the PRISMA method was used for the literature review, etc.

Congratulations to the author for writing an interesting and need-of-the-hour research article.
