REVIEW

Land Size Class Wise Growth of Crop Diversification Index:

A Case Study From Murshidabad District of West Bengal

(1) ABSTRACT

- It seems better to use the expression "crop diversification," as used in the keywords;
- Rewrite the sentence because the expression "different" was written three times;
- Standardize throughout the text the correct expression "1995-96 to 2015-16" or "1995-96 and 2015-16."

(2) INTRODUCTION

- The introduction practically does not address what is proposed in the summary, "analyse the spatiotemporal changes in crop diversification index" and "Land Size Class Wise Growth of Crop Diversification Index," which is in the title.

(3) STUDY AREA

- It would be interesting to mention what the main crops are.

(4) DATA SOURCE AND METHODOLOGY

- Inform the territorial limits of mapping;
- The methodology needs to be more detailed;
- It is necessary to inform the analysis period again here and what data will be used.

(5) RESULTS AND DISCUSSION

-The results are very descriptive. I suggest highlighting only the most important information, as the text presents maps and tables with this data.

This text does not present a discussion, which must be based on reference citations. It also does not discuss whether the methodology was efficient or not, which must also be done based on references.
