

# Review of: "Correlation of P-wave velocity with mechanical and physical properties of limestone with statistical analysis"

Jamal Khatib<sup>1</sup>

<sup>1</sup> University of Wolverhampton

**Potential competing interests:** The author(s) declared that no potential competing interests exist.

Generally the paper contains a good set of data and analysis. The authors should highlight the novelty of the work and how it differs from similar research on this topic

Table 3 caption..location should it be on top of the table?

Figure 13 to Figure 25. There are 23 figures with hardly any discussion.

English is generally good but requires improvement in some places. Examples are given below in square brackets [[ ]]

Seismic techniques are well understood, [[[ non-destructive, and low-cost methods that can be easily performed in the laboratory and in-situ ]]]].
