

# Review of: "Technological Advancement and Changing Skills: Imperative for a Paradigm Shift in Education Delivery in Zambia"

Silvia Catalina Farías-Gaytán

**Potential competing interests:** No potential competing interests to declare.

Thank you for the opportunity to review this paper.

The following recommendations consider the intention of this paper to be a research paper.

Title is attractive and denotes the constructs to be addressed in the paper. It includes topics relevant to society and education institutions.

Structure the paper and the abstract following Introduction Methodology Results Discussion and Conclusions so other researchers can reproduce it in other contexts. Using the scientific method differentiates a research paper from an essay.

The paper is missing the methodology which helps the reader to identify the process used to gather and analyze information, the population addressed, and how the author expects to cover the research objectives.

The narrative is fluid and includes references which support the ideas presented. Most references are recent (last five years), however other are ten or more years old, and since the topics relate to technology, it would be better to update them.

Include limitations and suggestions for future work.

As other reviewers stated, revise the citations to reduce the similarity, and align the references to a format so that facilitates other readers and researchers to look them up.

Hope these recommendations help, best of luck.
