

# Review of: "Correlating exciton coherence length, localization, and its optical lineshape"

Adel Bouazra

Potential competing interests: No potential competing interests to declare.

The paper presented has some interest but lacks clarity and precision. My comments are as follows: 1- Corresponding references to the equations mentioned in the text must be added. The transition from certain equations to others must also be explained. 2- The authors should add more figures for better understanding. 3- The interpretation of Figure 1 needs to be clear. 4- A conclusion must be added. After addressing these comments, I can approve the publication of this article.
