Potential competing interests: No potential competing interests to declare.

Thanks for the opportunity to review this manuscript which is focusing on higher education which is the concern of all.

After examination, I have identified several crucial issues that require attention. I trust that my comments will serve as constructive and beneficial feedback.

- The keywords are too general
- As a scientific paper the previous works should be critically reviewed to show the gap
- In all parts of the document there is no citation but I am not sure from where the authors brought reference lists. Which is unexpected at this level
- The document looks like description of policy or standard instead of scientific paper
